PROFESSIONAL SUMMARY

Computer Science graduate specializing in Artificial Intelligence, Machine Learning, and Computer Vision engineering. Hands-on experience developing ML models, building real-time computer vision pipelines, and deploying inference systems using TensorFlow, Keras, MediaPipe, OpenCV, YOLOv11, ByteTrack, and TFLite. Currently working as a Computer Vision Engineer Intern at Matrix AE, building real-time object detection, tracking, and analytics systems. Developed an AI-based Sign Language Translation system achieving approximately 95% gesture recognition accuracy. Award-winning AI developer recognized at multiple inter-university competitions and scored 96th Percentile in the HEC National Skill Competency Test in AI/ML. Eager to contribute to AI/ML engineering projects in a collaborative, growth-focused environment.

TECHNICAL SKILLS

ML Frameworks:	TensorFlow, Keras, TensorFlow Lite (TFLite), scikit-learn
Computer Vision:	YOLOv11, ByteTrack, MediaPipe, OpenCV, Object Detection, Object Tracking, Gesture Recognition, Image Classification, Real-Time Inference, Perspective Transformation, Image Segmentation
ML Concepts:	Deep Learning, Model Training, Model Inference, Model Deployment, Feature Extraction, Data Preprocessing, Transfer Learning (basic)
Languages:	Python, JavaScript (ES6+)
Libraries:	NumPy, Pandas, OpenCV
Web Technologies:	React.js, HTML, CSS, Tailwind CSS, REST APIs
Tools:	VS Code, Git, GitHub
Core Skills:	Problem Solving, Team Collaboration, Research, Analytical Thinking

WORK EXPERIENCE

Computer Vision Engineer Intern | Matrix AE | Lahore, Pakistan | June 2026 – Present

- Developing real-time computer vision systems for object detection, tracking, and visual analytics in a professional team environment.
- Built a Real-Time Vehicle Detection, Tracking and Analytics system using YOLOv11, ByteTrack, OpenCV, and Perspective Transformation — implementing vehicle counting, distance estimation, and speed estimation from live video.
- Built a Real-Time Face Detection and Segmentation system with AR fog visual effect using MediaPipe and OpenCV — implementing face detection, hand tracking, image segmentation, and real-time visual effects.

Frontend Development Intern | Verdant Soft | Lahore, Pakistan | July 2024 – October 2024

- Developed responsive user interface components using React.js and Tailwind CSS within a professional software development team.
- Collaborated cross-functionally across the development lifecycle including debugging, testing, and live project delivery.
- Gained practical exposure to software engineering workflows, version control, and team-based problem solving.

AI / ML AND COMPUTER VISION PROJECTS

Real-Time Sign Language Translation System | Final Year Project | 2025 - Present

Riphah International University, Lahore

- Engineered a real-time AI system achieving approximately 95% gesture recognition accuracy using TensorFlow, Keras, MediaPipe, and OpenCV.
- Designed and trained deep learning models for hand gesture classification and sign language detection.
- Built a complete machine learning pipeline covering data collection, preprocessing, model training, optimization, and TFLite deployment for mobile inference.
- Developed a two-way communication system supporting Sign Language to Text and Voice, and Text and Voice to Sign Language conversion.
- Won 1st Place at the Inter-University SPARK Business Idea Competition (Lahore Garrison University, 2025) and Most Innovative Idea at Techno Verse Think Tank (COMSATS University Islamabad, Lahore Campus).

Real-Time Vehicle Detection, Tracking and Analytics | Internship Project | 2026

Matrix AE, Lahore

- Built a real-time vehicle detection and tracking system using YOLOv11 and ByteTrack for multi-object tracking in live video streams.
- Implemented vehicle counting, distance estimation, and speed estimation using Perspective Transformation and OpenCV.
- Applied industry-level computer vision pipeline techniques in a professional internship environment.

Real-Time Face Detection and Segmentation with AR Fog Effect | Internship Project | 2026

Matrix AE, Lahore

- Developed a real-time face detection and image segmentation system with augmented reality fog visual effect using MediaPipe and OpenCV.
- Implemented face detection, hand tracking, image segmentation, and real-time visual effects processing.
- Strengthened practical skills in real-time computer vision, augmented reality, and video stream processing.

American Sign Language (ASL) Recognition System | Course Project | 2025

Riphah International University, Lahore

- Built an image classification model to recognize American Sign Language alphabet gestures from hand images using machine learning.
- Executed a full machine learning pipeline: data collection, preprocessing, feature extraction, model training, evaluation, and inference.
- Trained and tested the model on labeled ASL image datasets, optimizing for classification accuracy.

ACHIEVEMENTS AND AWARDS

- 1st Place - Inter-University SPARK Business Idea Competition, Lahore Garrison University (2025) - AI Sign Language Communication App.
- Most Innovative Idea - Techno Verse Think Tank, COMSATS University Islamabad Lahore Campus, co-sponsored by Invozone and FirstPass.AI (2025).
- 96th Percentile - HEC National Skill Competency Test (NSCT) in AI/ML and Data Analytics.

EDUCATION

Bachelor of Computer Science (BSCS) | Riphah International University, Lahore | 2022 - 2026

Relevant Coursework: Introduction to Artificial Intelligence, Data Structures, Database Systems, Object-Oriented Programming, Web Development, Algorithms

FSc Pre-Medical | KIPS College, Lahore | 2020 - 2022

Matriculation | The Punjab School, Lahore | 2018 - 2020

CERTIFICATIONS

- Python — Kaggle
- Intro to Machine Learning — Kaggle
- Artificial Intelligence: Preparing Your Career for AI — Udemy

AREAS OF INTEREST

Artificial Intelligence, Machine Learning Engineering, Computer Vision, Deep Learning, Object Detection and Tracking, Model Deployment, Assistive Technology, Research-Based Problem Solving
